

Figure 2. CMARP Stage II Information Flow Diagram. Goals, objectives, and policy issues are addressed through interactions among the Steering Committee, and CALFED and Agency staff and management. Data management, analysis and reporting, QA/QC protocols, and other analytical issues are addressed via other committees. Technical guidance on monitoring and research strategies comes from teams assembled in coordination with CALFED Program Managers and their existing technical teams. Core staff are also members of the technical teams. A Scientific Review Panel provides independent review of the Stage II results.
